

# Numstep: Box

a puzzle by Ben Cornish

2026-09-12

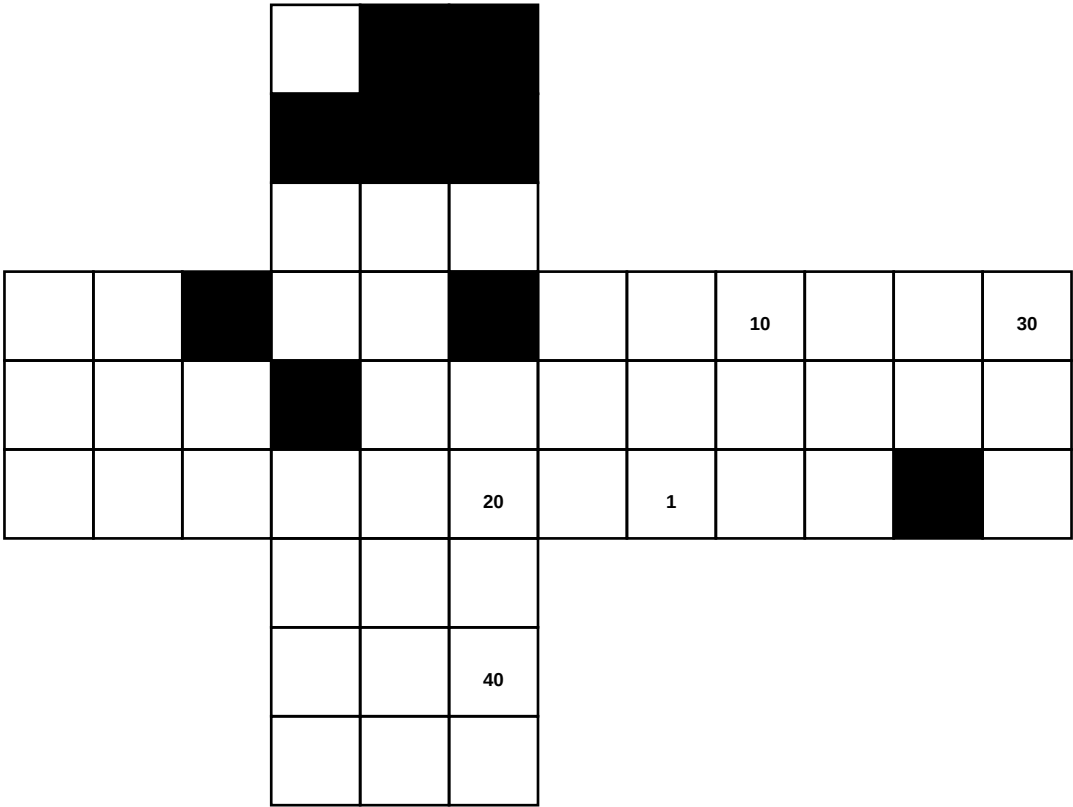

## HOW TO PLAY

Start at the coloured clue and follow the numbered chain across the surface of the box.

Move between cells that share an edge on a face, including across a box edge where the surface cells meet. Diagonal moves and moves through the inside of the box are not allowed. Black cells are blocked, and you cannot use a cell more than once.

The highest-numbered clue completes the chain and may be the terminal cell.

Adjacency follows the box surface, not the flattened drawing. Each cell connects to its four surface neighbours, with face-to-face transitions handled at the box edges.

## SOLUTION
