

Numstep: Cube

a puzzle by Ben Cornish

2026-09-12

HOW TO PLAY

Start at the coloured clue and follow the numbered chain in order across the cube.

Move between cells that share a face. This includes moving within a layer or between adjacent layers. Diagonal, edge-only and corner-only contacts do not count. Black cells are blocked, and you cannot use a cell more than once.

The highest-numbered clue completes the chain and may be the terminal cell.

Adjacency is three-dimensional six-way face adjacency: above, below, left, right, forward and back.
